

# INDEX

## A

Abbe and Rayleigh, 456  
Abbe's theory, 187  
Abbe's treatment, 187  
Abbott, E.A., 491  
aberration function, 182  
absorption, 269–270  
Airy diffraction amplitude, 154  
Airy diffraction pattern, 159  
Airy disc, 10  
Alonso function, 166  
amplitude hologram, 370  
amplitudes, 371  
analytical signal, 118, 144  
angular broadening, 126  
angular distribution, 131  
angular spectrum, 125–126  
annihilation operators, 258  
anomalous dispersion, 422, 426, 435  
anti-reflection gratings, 178  
anti-Zeno effect, 260  
apertureless scanning microscope, 484  
Arago, Dominique François, 54  
astrophysics, 153  
atom, 3, 143–146, 477, 479, 485  
atom nano-optics, 482  
atom-atom, 145  
atomic lenses, 480  
autocorrelation function, 61, 226, 277, 363, 370  
autostereoscopic display, 138

## B

back propagation, 180, 185, 187, 190, 195  
backlighting, 116–117  
backscattered intensity, 273–274  
backscattering, 69, 224, 240, 273, 284  
ballistic photons, 86  
Barakat, Richard, 60, 89  
Bartholinus, Erasmus, 54, 58  
Bayesian, 374, 414  
Bessel function, 252, 254, 292  
Bethe hole, 480, 483  
Bethe-Salpeter, 70

Bethe-Salpeter equation, 70, 74  
binary objects, 3  
biological applications, 86, 195  
biological tissues, 86, 270  
biology, 51  
biomedical applications, 86  
biomedical imaging, 271  
biomolecular, 86  
birefringent, 88  
black hole, 403–404, 406  
blackbody radiation, 104, 163, 365  
blackbody source, 163  
Bloch's theorem, 382  
blue shift, 352, 354  
Bohr radius, 478  
Boltzmann, 58, 69–70  
Boltzmann's constant, 67, 277  
Born, Hedwig, 40  
Born, Max, 6, 29–41, 43–46, 49, 52, 92  
Born Award, 150, 362  
Born Prize  
Born and Rytov approximation, 411  
Born and Wolf, 14, 176, 195, 424–425, 477  
Born approximation, 38, 71, 115  
boundary diffraction, 393  
brightness, 130, 202, 204  
Brillouin precursor, 434, 448  
Brillouin's description, 423  
Brillouin's interpretation, 431  
Brillouin scattering, 261  
Brownian particles, 277

## C

*Calculus of Variations*, 35–36  
camera, 162–163, 202  
camera aperture, 163, 164  
Carter's test, 407  
Cauchy integral, 364  
Cauchy principal value, 250  
Cauchy's residue theorem, 431  
causal function, 364–366  
Cayley-Hamilton theorem, 63  
CCD arrays, 195–196  
CCD camera, 189

- cellular multilayers, 204
  - cellular phones displays, 116
  - cellulose esters, 275
  - channel waveguide, 133
  - classical diffusion, 280
  - Coddington's equations, 387
  - coefficients, 269
  - coherence, 3, 29, 46, 51–52, 96, 99, 101, 104–105, 109–110, 177
  - coherence effects, 202
  - coherence length, 273
  - coherence matrix, 88, 95, 98, 101, 115
  - coherence of light, 29
  - coherence properties, 38, 268
  - coherence radius, 131, 358
  - coherence tensors, 98
  - coherence theory, 207, 218
  - coherence-polarization, 98
  - coherent backscattering, 267
  - coherent image, 182, 193
  - coherent interference, 224
  - coherent laser beam, 117
  - coherent radiation, 105, 147
  - coherent scattering, 170
  - coherent sources, 142
  - coherent-mode decomposition, 109
  - colloids, 276
  - color vision, 204, 207, 209, 213
  - colored shadow, 201, 207, 209, 213, 216
  - communication platforms, 116
  - complex 3D images, 412
  - complex amplitude, 118, 291–292, 299, 304–305
  - complex degree of (spatial) coherence, 132, 363
  - complex plane, 250
  - complex scattering amplitude, 471
  - complex wave amplitude, 130
  - complex wavenumber, 425
  - computed tomography, 192, 194
  - computer images, 413
  - computer-generated Fourier hologram, 494
  - conventional radiometry, 132
  - correlation, 98, 102, 148
  - correlation effects, 268
  - correlation function, 38
  - correlation length, 68
  - correlation matrix, 109
  - correlation theory, 250
  - correlation-induced shift, 52, 142, 149, 223
  - Courant Institute, 18, 45
  - Courant-Hilbert, 36
  - cross-correlation functions, 58
  - cross-spectral density, 97, 98, 106, 109, 323, 327
  - cross-spectral density tensors, 95
  - crystal optics, 206
  - crystallography, 17
  - crystals, 10, 54
  - cubic dispersion approximation, 430
  - Czech Republic, 247, 260, 262, 265
- D**
- Debye's method, 423
  - degree of coherence, 354
  - degree of polarization, 65, 101–104, 108
  - degree of spatial coherence, 142, 147
  - degree of spectral coherence, 223

excited molecule, 484  
 extrapolation length, 280

## F

far field, 100, 103  
 far infrared, 153  
 far-field detection, 465  
 Faraday, Michael, 56  
 fast Fourier transform, 437  
 fiber communication, 116  
 fiber optics, 139, 271, 283  
 fiber sensors, 116  
 Fick's law, 270  
 first Born approximation, 224, 408–410, 457  
 fisheye lens, 138  
 flat panel displays, 116  
 Flatland, 491–492, 494  
 Flatland wavelength, 491  
 fluctuations, 73, 148  
 fluorescent sources, 131  
 Foucault's pendulum, 321  
 Fourier, 466  
 Fourier amplitude, 371  
 Fourier amplitude and phase, 371  
 Fourier analysis, 249  
 Fourier component, 132, 217, 459, 464–465  
 Fourier domain, 463, 465  
 Fourier intensity, 371  
 Fourier modal method, 382  
 Fourier optics, 21, 115–116, 129, 139, 370  
 Fourier phase, 365, 371, 373, 375  
 Fourier series, 132  
 Fourier space, 466, 472  
 Fourier spectrum, 369, 437  
 Fourier synthesis, 15  
 Fourier terms, 207  
 Fourier transform, 12, 15, 98, 116, 118, 120, 122, 144, 160, 188, 249, 363–366, 370, 372–373, 396, 408, 411, 429, 458  
 Fourier-Bessel transform, 350  
 Fourier-Laplace integral, 426, 428  
 Fourier/Fresnel, 204  
 Fourier/photoreceptor space, 201  
 fourth-order entropy, 87  
 Fraunhofer diffraction, 119, 353, 429

Fredholm equation, 97, 109, 331  
 Fresnel, 54, 320  
 Fresnel approximation, 290, 292  
 Fresnel coefficient, 281, 282  
 Fresnel diffraction, 119, 160  
 Fresnel integral, 381  
 Fresnel number, 289–292, 294–295, 299–302, 304–306, 308–313  
 Fresnel reflection, 229  
 Fresnel transform, 429  
 Fresnel zones, 289  
 Fresnel's equations, 382, 384, 388  
 front projection TV, 116  
 Fuchs, Klaus, 33

## G

Gabor, 29–32, 34, 46, 133, 179, 185–186, 370, 374, 407, 415  
 Gabor hologram, 186, 189–190, 196  
 Gabor holographic system, 184  
 Gabor holography, 186, 189–190  
 Galileo, 321  
 Gamma function, 252  
 Gaussian, 61, 121, 343  
 Gaussian amplitude distribution, 290  
 Gaussian beam, 107, 290, 298, 311–314, 380, 384, 391  
 Gaussian curves, 210, 212, 216  
 Gaussian envelope function, 437  
 Gaussian envelope pulse, 437, 439, 449  
 Gaussian field, 147  
 Gaussian form, 226, 236  
 Gaussian functions, 249  
 Gaussian moment theorem, 107  
 Gaussian probability, 343  
 Gaussian pulse, 444, 446, 448–449  
 Gaussian random process, 226, 239  
 Gaussian random value, 343, 344  
 Gaussian scalar wave, 107  
 Gaussian shape, 345  
 Gaussian statistics, 107  
 Gaussian surface, 239  
 Gaussian vector beams, 107  
 Gell-Mann matrices, 63, 101–102  
 general radiative transfer theory, 269  
 generalized radiance, 153–154, 166  
 generalized radiometry, 96  
 geometric optics, 129, 131, 153, 379, 387–391

geometric phase, 59  
 Goethe, 201, 206, 209–210  
 Goethe's experiment, 210  
 Goethe-Newton controversy, 217  
 Goos-Haenchen shift, 384  
 grating diffraction, 126  
 gratings, 130  
 gray shadows, 213  
 Green dyadic, 99  
 Green's function, 79, 148, 229, 231, 280, 369, 456–457  
 Green's tensor, 331  
 group velocity, 270, 421, 425, 439, 442, 444–448  
 group velocity dispersion, 428–429  
 group velocity pulse, 437

## H

Hamilton, 421  
 Hamilton-Jacobi ray theory, 424  
 Hamiltonian, 67, 157, 257–258  
 Hanbury-Brown, and Twiss, 20, 59, 107, 363  
 Havelock's method, 423  
 Heaviside, 422, 427  
 Heaviside step-function, 435  
 Heaviside step-function signal, 444  
 Heisenberg uncertainty principle, 58, 130  
 Helmholtz equation, 290, 369, 426, 493  
 Hermitian, 62, 97, 99, 101–102, 109  
 Hermitian conjugate, 99  
 Hermitian function, 370  
 Hermitian matrix, 62, 99  
 Hermitian operator, 155  
 Hertz, Heinrich, 56  
 high energy physics, 37  
 higher-order Born and Rytov approximations, 416  
 highly scattering media, 268  
 Hilbert, David, 35–37, 41, 46  
 Hilbert space, 36, 467  
 Hilbert transform, 96, 250, 364–365, 373  
 Hilbert-Schmidt kernel, 97, 109  
 hologram, 133, 169–170, 172, 177, 179, 184–186, 188, 370, 402–404, 411, 413, 415–416  
 hologram aperture, 174

hologram wavefronts, 415  
 holographic beam forming, 169  
 holographic imaging system, 185  
 holographic inversions, 416  
 holographic principle, 403–404, 406  
 holographic reconstruction, 194  
 holography, 29, 46, 179, 200, 202, 370, 375, 399, 401, 404, 407–409, 411, 415, 418  
 homeland security, 133  
 Hopkins, Robert 21  
 Hopkins, H.H., 3, 31  
 hot embossing, 129  
 Hubble effect, 494  
 human eye, 201, 204, 207, 209  
 human vision, 201–202, 221  
 Huygens-Fresnel principle, 323  
 Huygens-Fresnel operator, 156

## I

ICO Congress, 247  
 illumination engineering, 153
