Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

SESSION 1 IMAGING AND BIOMARKERS I

9318 02	Non-contact optical imaging of healing and non-healing diabetic foot ulcers [9318-1]
9318 04	High histologic grade and increased relative content of tryptophan in breast cancer using ratios from fingerprint fluorescent spectral peaks [9318-3]
9318 05	Propagation and transmission of optical vortex beams through turbid scattering wall with orbital angular momentums [9318-37]

SESSION 2 IMAGING AND BIOMARKERS II

9318 06	Photoacoustic biopsy: a feasibility study (Invited Paper) [9318-4]
9318 07	Raman spectroscopy complements optical coherent tomography in tissue classification and cancer detection [9318-5]
9318 08	Tissue classification and diagnostics using a fiber probe for combined Raman and fluorescence spectroscopy [9318-6]

SESSION 3 INSTRUMENTATION AND TECHNIQUES I

9318 0B	Fluorescence lifetime spectroscopy for breast cancer margins assessment (Invited Paper) [9318-9]
9318 0D	Intraoperative detection of glioma invasion beyond MRI enhancement with Raman spectroscopy in humans [9318-11]

SESSION 4 INSTRUMENTATION AND TECHNIQUES II

9318 0F	Microscopy with UV Surface Excitation (MUSE) for slide-free histology and pathology imaging (Invited Paper) [9318-12]
9318 0G	Vessel contrast enhancement in hyperspectral images [9318-13]
9318 0H	Experimental evaluation of a hyperspectral imager for near-infrared fluorescent contrast agent studies [9318-14]

9318 0J **Discrimination of premalignant conditions of oral cancer using Raman spectroscopy of urinary metabolites** [9318-16]

SESSION 5 RAMAN SCATTERING METHODS

9318 0L **Biophotonics of skin: method for correction of deep Raman spectra distorted by elastic scattering** [9318-18]

SESSION 6 POLARIZATION METHODS

9318 0O **Image enhancement of surface micro-structure on mucosa for polarimetric endoscopy (Invited Paper)** [9318-21]

9318 0R **Classification of normal and precancerous cervical tissues using Nonlinear Maximum Representation and Discrimination Features (NMRDF) on polarized reflectance data** [9318-24]

POSTER SESSION

9318 0U **Optical biopsy: a new armamentarium to detect disease using light** [9318-26]

9318 0V **Non-negative constraint analysis of key fluorophores within human breast cancer using native fluorescence spectroscopy excited by selective wavelength of 300 nm** [9318-27]

9318 0W **Validation of hierarchical cluster analysis for identification of bacterial species using 42 bacterial isolates** [9318-28]

9318 0X **Tryptophan as key biomarker to detect gastrointestinal tract cancer using non-negative biochemical analysis of native fluorescence and Stokes shift spectroscopy** [9318-29]

9318 0Y **A comparison study of different excitation wavelengths to determine the relative content of key biomolecules in breast cancer and breast normal tissue** [9318-30]

9318 0Z **Real-time Raman sensing without spectrometer** [9318-31]

9318 10 **Resonant Raman spectra of grades of human brain glioma tumors reveal the content of tryptophan by the 1588 cm^{-1} mode** [9318-32]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Stavros G. Demos, Lawrence Livermore National Laboratory
(United States)

Introduction

The Optical Biopsy XIII conference, part of the SPIE Photonics West BIOS symposium, was held 10–11 February 2015, in San Francisco. The conference consisted of six sessions and hosted 25 oral presentations, with 14 of these from international contributors, and also included 10 poster presentations. The quality of the presentations was very high and the sessions were well attended. The speakers were informative, engaging, and knowledgeable, thus ensuring a very rewarding event, especially for the students.

The title of the Optical Biopsy XIII conference this year was followed by the descriptive: "Toward Real-Time Spectroscopic Imaging and Diagnosis" in order to encompass the focus area of this conference. As a result, about 70 percent of the oral presentations dealt with rapid evaluation or disease detection at the tissue level. Most presentations were concentrated in three main thematic areas: a) fluorescence, time-resolved fluorescence and multispectral imaging; b) light scattering methods including Raman scattering and polarization methods, and; c) the development of new methods and instrumentation or advancements of existing methods.

Last year, we discussed that "optical metabolomics" may be a future growth area in the field of optical biopsy. There were two presentations that focused on this area, both providing very promising results. We hope to see more submissions in this area next year. The rapid assessment of surgical specimens may also be another growth area for optical biopsy techniques. Although researchers in optical biopsy have largely focused on developing methods for in vivo detection of disease, the rapid evaluations of excised specimens may be the "first in line" application toward in vivo implementation. The current practice of cryosection for rapid tissue assessment (sectioning of frozen specimens) to perform rapid microscopic analysis of a specimen produces slides of lower quality than formalin fixed paraffin embedded tissue processing. While diagnosis can be rendered in many cases, the tissue is lost and cannot be used for further analysis. Alternatively, optical biopsy methods can provide an even faster method to evaluate the specimen and preserve the specimen for further analysis. We will focus on the potential of optical biopsy methods as a better alternative to cryosection in the next conference.

We wish to thank Bayspec Inc., Coherent Inc., Corning Inc., Energy Research Company, Fianium Ltd., Hamamatsu Corp., Intuitive Surgical Corp., LEUKOS, NKT Photonics A/S, PerkinElmer Inc., and Thorlabs, Inc. for their support of Optical Biopsy XIII sessions. We also thank the session chairs, program chairs, and SPIE staff for their help in making this conference successful.

Robert R. Alfano
